Education

Harvard Online

Oct. 2023 – Feb 2024

CS50x, CS50w Certificates

Online

Griffith University

Feb. 2020 – Nov 2022

Bachelor of Design in Product Design

Gold Coast, QLD

Experience

Contract Web Developer — React, Express.js, PostgreSQL, AWS, Tailwind

Nov 2024 – Feb 2025

Designer, Full-stack developer

- Built a full-stack video streaming MVP for instructional content featuring user authentication, video browsing with skill-level/tag filtering, video uploading, thumbnail selection directly from video frames, and a favorites system
- Designed a serverless media processing pipeline using AWS Lambda and MediaConvert, triggered on S3 upload, to automatically compress and transcode videos to an output S3 bucket
- Implemented secure direct-to-S3 uploads via presigned URLs (up to 1GB) with client-side thumbnail generation, and signed URL video delivery for authenticated playback
- Deployed on AWS EC2 with Nginx as a reverse proxy, Redis-backed session management, and role-based access control for an admin panel supporting full content lifecycle management
- Architected the database layer with Prisma ORM modeling many-to-many relationships for tags and user favorites, backed by PostgreSQL

Projects

Mesh Chat (AI Assisted) | Express.js, React(TS), Tailwind CSS, WebSockets, WebCrypto, SQLite3

April 2026

- Provided a detailed protocol specification defining the cryptographic scheme, JSON envelope format, gossip-based state replication, and multi-phase authentication flow
- Specified the system architecture including n-to-n mesh topology, in-memory state tables replicated via gossip, cross-server message routing, and a registration/login flow where private keys are encrypted client-side and stored server-side without exposing secrets
- Implemented the specification using an object-oriented approach with AI-assisted development (Claude), building out the server (Express.js, SQLite), client (React, TypeScript), and shared protocol library across 10 development phases

Scheduling web app (paliascheduler.com) | Next.js, TypeScript, Tailwind CSS, Python

February 2026

- Built a fully client-side activity scheduling tool for the game Palia, enabling players to plan and track time-sensitive in-game events
- Wrote Python web scrapers using Playwright and BeautifulSoup to extract game data and images from wiki sources, transforming raw HTML tables into structured TypeScript data files consumed by the frontend
- Implemented a real-time in-game clock system that converts real-world UTC time to Palia's 24x accelerated day/night cycle, updating at 250ms intervals for accurate time tracking
- Designed an interactive daily schedule view with a 24-hour timeline, current time indicator, and support for overlapping activities via calculated column positioning
- Integrated the Web Notifications API to alert players one in-game hour before scheduled activities begin, with per-activity duplicate prevention to prevent repeat notifications within the same Palia day
- Built a searchable, filterable activity catalog using virtualized list rendering (react-virtuoso) for performant scrolling across hundreds of items, with category tabs and real-time search

Welcome book CMS | Django, JavaScript, HTML, CSS

January 2024

- A web based welcome book for an Airbnb host to provide their guests with information, activities, and rules for their stay.
- Allows the host to update the welcome book remotely by updating text, images, and links.

Technical Skills

Frontend: Next.js, React, JavaScript (ES6+), TypeScript, TailwindCSS, HTML/CSS,

Backend: Node.js, Express.js, REST APIs

Databases: PostgreSQL, SQLite, SQL

Cloud and DevOps: AWS (S3, EC2, Lambda), Git, GitHub, Docker, Postman
